## Transfer of Large Data Volumes via Steinbeis FTP-Server

### Task

For the exchange of large data volumes with our customers we provide a FTP server on which our customers can upload data.

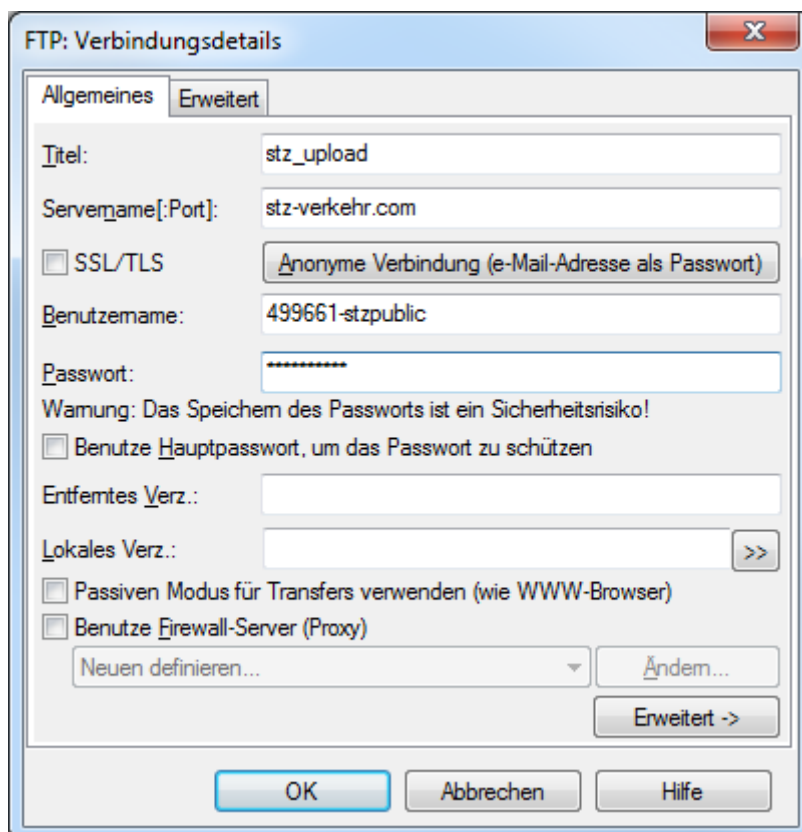

To guarantee data security we recommend encrypting and compressing the data before uploading onto our server. To compress the data you can use the free programme “7-Zip” for example.

**This FTP-access is public! If you upload the data unencrypted, other customers will be in a position to enter these files.**

If the data volume increases 10 GB please contact Steinbeis before upload.

### FTP-Server for the Upload

Server: stz-verkehr.com  
User: 499661-stzpublic  
Password: Lie]th7jai

Afterwards the file is available under:

[http://stz-verkehr.com/files/ftp/ftp\\_upload/DATEINAME](http://stz-verkehr.com/files/ftp/ftp_upload/DATEINAME)

Replace „DATEINAME“ by the filename and the file extension. If you create a subfolder, please complete this folder as well!
